DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

On page 1, line 24, the specification reads “die” but should read --dye--.

Further, on page 6, line 15, the specification reads “a differing rates” but should read --at differing rates--.

Appropriate correction is required.

Claim Objections

2. Claims 1-21 are objected to because of the following informalities:

Claim 1 reads “an fluorescence object” but should read --a fluorescence object--.

Claims 1 and 8-11 all reference filters that are disclosed as “(23; 28, 29, 31, 32)” but should read --23, 28, 29, 31, 32-- wherein the correction is replacing the semicolon after 23 with a comma.

Further, claim 1 part b also includes a period at the end of the sentence, which should be a comma.

Claim 10, part a, discloses “filter draws (21; 21a, 21b)” but should read --filter draws (21, 21a, 21b)--.

3. Claims 12, 16 and 18-21 disclose one or more of the following elements: A, B, C or D. The claims are objected to because they do not place the referenced elements in parentheses.

Reference characters corresponding to elements recited in the detailed description of the drawings and used in conjunction with the recitation of the same element or group of elements in

Art Unit: 2878

the claims should be enclosed within parentheses so as to avoid confusion with other numbers or characters which may appear in the claims. See MPEP § 608.01(m).

Appropriate correction is required.

4. The balance of the claims are objected to for being dependent from an objected claim.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claim 1-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

7. Claim 1 recites the limitation "a selective filter" in part b of the claim. However, in part c of the claim, the filter is referred to as "the individual filters." It is unclear if there is a plurality of filters or if there is only a single filter.

8. The balance of claims are objected to as being dependent on an already rejected claim.

Allowable Subject Matter

9. Claims 1-21 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

10. The following is a statement of reasons for the indication of allowable subject matter:

None of the prior art of record discloses that the filters are continuously adjusted so that by attenuating the associated excitation bands, all fluorescence intensities are adjusted to their intensity set point values. Although some prior art discloses the adjustment of the illumination beam with a filter, it is only adjusted once, not continuously as disclosed by the invention.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a. US Patent 5,371,624-This reference discloses the creation of multiple excitation bands using a filter, and the output of an emission band, however, it does not disclose the continuous adjustment of the filters to a setpoint value.
- b. US Patent 6,510,001- This reference discloses an optical arrangement that extracts spectral elements that can be adjusted to the excitation wavelength.
- c. US Patent 6,225,636-This reference discloses a method for detecting fluorescence of a sample, using several filters and creating excitation and emission bands.
